

Week 18

Project #2: Visualize Me Captain!

The Data Bootcamp | 2018

Your Task

Tell a story...

With Data!

wut

Requirements

Project Description

1. For this second project, your task will be to "tell a story" through data visualizations.
2. Unlike the first project, where you focused on using the "Analytics Paradigm" to explore relationships in "report form", this project should be more focused on providing users an interactive means to explore data themselves.
3. Just as with the first project, you will be asked to conduct a 10 minute presentation that lays out your theme, coding approach, data munging techniques, and final visualization.
4. You may choose a project of any theme, but we encourage you to think broadly. The universe is wide and expansive. Don't limit yourself to what you know.
5. You will have roughly two weeks to complete this project. You will present your final work on Saturday (March 03, 2018). You will have ample time in class to work with your group (but expect to put in some long nights in the days ahead).

Specific Requirements

1. Your visualization must include a **Python Flask** powered RESTful API, **HTML/CSS**, **JavaScript**, and at least one **database** (MySQL, MongoDB, SQLite, etc.)
2. Your project should fall into one of the below **four tracks**:
 - A custom "creative" D3.js project (i.e. non-standard graph or chart)
 - A combination of Web Scraping and Leaflet or Plotly
 - A dashboard page with multiple charts all updating from the same data
 - A "thick" server that performs multiple manipulations on data in a database prior to visualization (must be approved)
3. Your project should include at least **one JS library** that we did not cover.
4. Your project must be powered by a dataset with at least **100 records**.
5. Your project must include some level of **user-driven interaction** (e.g. menus, dropdowns, textboxes, etc.)
6. Your final visualization should ideally include at least **three views**

Schedule

Schedule

1. **Today/Wednesday:**

Between now and Wednesday, you will need to start brainstorming topics with your group and researching potential datasets. Your focus should specifically center around:

- Selecting a Topic
- Finding a Dataset
- Finding Inspiration
- "Sketching" your ideal visuals
- Creating a 1-Page Proposal

2. **By End-of-Class Wednesday:**

You will need to create a 1 page proposal. The proposal should include:

- A brief articulation of your chosen topic and rationale
- A link to your dataset(s) and a screenshot of the metadata if it exists.
- 3-4 screenshots of relevant "inspiring" visualizations that frame your creative fodder
- A sketch of the final design
- A link to the primary GitHub repository you'll be housing your work in

3. **Saturday of Week 2:** presentations (with Tues/Thurs section)

One Last Thought!

- **Project week is a great, great** time to tie up loose ends both with your group and on your own.
- If there are topics you'd like to review, shoot me and the TAs a message. We're happy to do (recorded) extra review sessions for small groups during these weeks.
- **Oh. And good luck!!!!!!!**

Questions / Discussion
